## 856 Shipping Notice / Manifest

This document contains the format and establishes the data contents of the Ship Notice/Manifest Transaction Set (856) for use within the context of an Electronic Data Interchange (EDI) environment.

The transaction set can be used to list the contents of a shipment of goods as well as additional information relating to the shipment, such as order information, product description, physical characteristics and carrier information. The transaction set enables the sender to describe the contents and configuration of a shipment in various levels of detail. The sender of this transaction is the organization responsible for detailing and communicating the contents of a shipment, or shipments, to one or more receivers of the transaction set. The receiver of this transaction set can be any organization having an interest in the contents of a shipment or information about the contents of a shipment. Suppliers must supply the Advanced Ship Notice to MTU DD within 30 minutes of the shipment leaving the plant.

Enhance the existing 856 to allow consolidation of shipments that originate overseas. The current design of 856 from domestic vendors will not be impacted, meaning the bill of lading; vendor and invoice are stored in the shipment segment, with the materials in the item segment. For example, one domestic inbound could have multiple materials from the same vendor. The enhanced 856 functionality will allow consolidation where the shipment segment will now contain the master bill of lading and partner functions and the inbound items will contain house bill of ladings, vendor numbers and other material specific data (ex. invoice). For example, one consolidated 856 could have multiple materials from multiple vendors.

Segments added from original 856 to allow consolidation:

V1 Vessel Identification
R4 Port or Terminal
DTM Date/Time Reference

Updated specifications are listed in full below.

Level Header N/ALoop Usage Mandatory

Max Use

To transmit identifying numbers, dates and other basic data relating to the transaction set. **Purpose** 

Syntax 1) If BSN07 is present, BSN06 is required.

1) BSN03 is the date the shipment transaction set is created. Semantic

2) BSN04 is the time the shipment transaction set is created.

The date and time are the date and local time of the creation of the transaction. **Notes** 

When canceling an ASN, send the same SID number as the ASN to be cancelled.

Segment : **HL** Hierarchical Level

Level : Detail

Loop : HL – Shipment Usage : Mandatory

Max Use :

**Purpose**: To identify dependencies among and the content of hierarchically related groups of data segments. **Comments**: 1) The HL Segment is used to identify levels of detail information using a Hierarchical Structure, such

as relating line item data to shipment data, and packaging data to line item data.

2) HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment, and would be incremented by one in each subsequent HL segment within the transaction.

incremented by one in each subsequent. HL segment within the transaction.

3) HL02 identifies the Hierarchical ID Number of the HL segment to which the current HL segment is

subordinate.

4) HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HL03 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order or item level

information.

Examples : HL\*1\*\*S

N1 - HL Shipment Loop

Mandatory Usage

Max Use

**Purpose** To identify a party by type of organization, name and code

Syntax 1) At least one of N102 or N103 is required.

2) If either N103 or N104 is present, then the other is required.

A) This segment, used alone, provides the most efficient method of providing organizational Comments:

identification. To obtain this efficiency the "ID Code" (N104) must provide the MTU DD customer 'Charge to' and 'Ship to' code if the sending party is a MTU DD customer or a direct ship vendor. B) If shipment is from Consolidator, the conditional N101 codes are mandatory. These conditional N101

codes should send the corresponding SCAC Code in N104.

C) If shipment is from Consolidator, for SU (Supplier/Manufacturer), specify the vendor code of the real

Supplier, if necessary.

Segment : V1 Vessel Identification

Level : Detail

Loop : V1 – HL Shipment

Usage : Optional

Max Use : 1

Purpose : To provide vessel details and voyage number.

Syntax : 1) R0102 - At least one of V101 or V102 is required.
2) C0801 - If V108 is present, then V101 is required.

**Semantics**: 1) V103 is the code identifying the country in which the ship (vessel) is registered.

2) V105 identifies the ocean carrier.

Comments: This segment is relevant only if the shipment is from a Consolidator

Examples: V1\*\*Vessel 193

Segment : **HL** Hierarchical Level

Level:DetailLoop:HL – OrderUsage:Mandatory

Max Use :

Purpose : To identify dependencies among and the content of hierarchically related groups of data segments.

Comments : A) The HL Segment is used to identify levels of detail information using a Hierarchical Structure, such

as relating line item data to shipment data, and packaging data to line item data

B) HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment, and would be

incremented by one in each subsequent HL segment within the transaction.

C) HL02 identifies the Hierarchical ID Number of the HL segment to which the current HL segment is

subordinate.

D) HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HL03 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order or item level information.

E) HL04 indicates whether or not there are subordinate (or child) HL segments related to the current HL

segment.

Examples : HL\*2\*\*0

Segment : LIN Item Identification

Level:DetailLoop:HL – OrderUsage:Mandatory

Max Use :

**Purpose**: To specify basic item identification data.

**Syntax**: 1) If a qualifier is present, then the associated code is required.

**Semantics**: 1) LIN01 is the line item identification.

Comments: 1) See the Data Dictionary for a complete list of ID's.

2) LIN02 through LIN31 provide for fifteen (15) different product/service ID's for each item. For

Example: Part Number, Item Number, Control Number, and Part Description.

3) There should be one LIN segment in each Order level. The LIN segment is used to identify the buyer's number or Returnable Container Part number and to cross reference

parts to returnable containers. If returnable container is used or expendable container (see comment 4),

the Container Part number is required in the LIN segment for the released part, as well as in an

additional LIN segment in its own Order level.
4) For expendable containers use 00000EXP.

5) The LIN for the number of returnable containers resides in their own level. See samples at the end of

the document.

Examples : LIN\*\*BP\*05108965\*CH\*US\*RC\*0CC00091

LIN\*\*RC\*0CC00091

Expendable Example:

**CTT** Transaction Totals Segment

Level Summary Loop

Usage Mandatory

Max Use

To transmit a hash total for a specific element in the transaction set. Purpose

Syntax 1) If CTT03 is present, then CTT04 is required.

2) If CTT05 is present, then CTT06 is required.

This segment is intended to provide hash totals to validate transaction completeness and correctness. CTT\*6\*15 Comments:
